

1. The first group of respondents (Group 1) consisted of 100 individuals who were  
 2. selected from a random sample of the general population. They were asked to  
 3. provide information on their demographic characteristics, including age, gender,  
 4. education level, and income. They were also asked to provide information on  
 5. their current employment status and their reasons for leaving their previous  
 6. job. The data collected from this group was used to analyze the relationship  
 7. between demographic factors and job satisfaction.

2. The second group of respondents (Group 2) consisted of 100 individuals who  
 8. were selected from a random sample of the general population. They were asked  
 9. to provide information on their demographic characteristics, including age, gender,  
 10. education level, and income. They were also asked to provide information on  
 11. their current employment status and their reasons for leaving their previous  
 12. job. The data collected from this group was used to analyze the relationship  
 13. between demographic factors and job satisfaction.

3. The third group of respondents (Group 3) consisted of 100 individuals who  
 14. were selected from a random sample of the general population. They were asked  
 15. to provide information on their demographic characteristics, including age, gender,  
 16. education level, and income. They were also asked to provide information on  
 17. their current employment status and their reasons for leaving their previous  
 18. job. The data collected from this group was used to analyze the relationship  
 19. between demographic factors and job satisfaction.

4. The fourth group of respondents (Group 4) consisted of 100 individuals who  
 20. were selected from a random sample of the general population. They were asked  
 21. to provide information on their demographic characteristics, including age, gender,  
 22. education level, and income. They were also asked to provide information on  
 23. their current employment status and their reasons for leaving their previous  
 24. job. The data collected from this group was used to analyze the relationship  
 25. between demographic factors and job satisfaction.
